# A Glitch in the new World

Hello, My name is Alex Murphy. I am Cop stationed at Detroit Police Department, or at least I was. I am writing this because I felt the need to feel human and as I understand humans express themselves. I say human because that's what is felt of me or m former self. I was investigating a crime of firearms dealing and came across this huge operation of illegal firearms that were being stolen from evidence locker and being sold to the highest bidder, of course dirty cops were involved and when I tried to report them and they retaliated by placing a bomb inside my car and blowing me up. OMNIcorp gave me second life, 80% of my body had fourth degree burns. Dr. Norton from OMNIcorp with my wife consent operated in me and made a humanoid, 90% of my body were replaced by prosthetics and they marketed me as ROBOCOP. My abilities were enhanced by AI controlling my prosthetics and I was led believe that It was I who was controlling myself or my actions, but in truth it was the AI doing all the work and I was just tagging along with the machine. I was able to decide but then they considered my decision making as a glitch in my software, and as I stood there quietly watching them arguing them about making me less human, *'I am sure it's only a glitch, only a temporary setback'* they said, and I stood as they decided to make me a **product with conscience** and decided to give me directives, **1)** Serve the public trust,**2)** Protect the innocent,**3)** Uphold the law. They made me a **product with conscience.** As I lay on the table while Dr. Danette Norton and his assistant operated on me, trying to make me less human, I kept wondering is this their decision? My humanity, my conscience when did I lose those, was it after the bomb exploded and almost killed me or was it when I was quietly watching, when they called me a **product with conscience.** When did I lose my right to be HUMAN? Is my humanity a glitch in this world where AI is considered superior than a human? Is human part of Humanoid a setback?
